

MSc Computer Science graduate from Newcastle University with a strong foundation in backend software development, building RESTful APIs, relational data models, and service-layer architecture in Java and Spring Boot. Experienced across the full stack, including React frontends and PostgreSQL/MySQL databases, with a track record of shipping projects end-to-end, including a live site delivered for a paying client.

EXPERIENCE

Web Developer Infinity Fitness Gym & Sports Medicine Clinic

July 2026 – Present

North-East · Sole developer, direct client work

- Built and shipped a responsive site for a family-run gym, working with the owner from requirements to launch.
- Designed a self-service Join flow that generates a unique standing order reference per member, so the gym can match bank payments to a person and plan with no per-transaction fees.
- Built a browser-based tool that parses CSV and PDF bank statements client-side with pdf.js, flagging lapsed standing orders and outdated prices without data leaving the device.

EDUCATION

Newcastle University

Sept 2025 – Sept 2026

MSc Computer Science, Newcastle upon Tyne, UK

- Grade: Distinction
- Advanced Programming, Software Engineering & Team Project, Database Systems, Web Technologies, Computer Networks, Cybersecurity, AI Fundamentals & Responsible Innovation, Human-Computer Interaction.

Newcastle University

Sept 2021 – Aug 2024

BA (Hons) Contemporary Music, Newcastle upon Tyne, UK

PROJECTS

Restrum Online Instrument Marketplace

May 2026 – Aug 2026

North-East · [restrum.uk](#)

- Designed a relational schema of 10+ entities (User, Listing, ListingMedia, Instrument, Passport, Conversation, Message, SavedListing, UserEndorsement, UserFollow) covering marketplace listings, buyer-seller messaging, and an instrument provenance (“passport”) history feature.
- Built a RESTful API and service layer in Spring Boot handling listing management, messaging, and user relationships, backed by PostgreSQL.
- Implemented JWT-based authentication and account/session management.
- Built a React frontend consuming the API, deployed to AWS (EC2 + PostgreSQL via Neon).

WhistleStop Coffee Hut App Team Project (Backend Developer)

Feb 2026 – May 2026

North-East · Team of 5, Agile

- Owned backend development within a 5-person Agile team, building the authentication and customer management system for a mobile-optimised ordering platform using Java, Spring Boot, and MySQL.
- Implemented JWT-based user registration, login, and session handling.
- Collaborated using Git across the team, integrating backend endpoints with a UI prototyped in Figma.

StaticGrind Browser-Based Glitch Art Tool

May 2026 – Aug 2026

North-East · [staticgrind.com](#)

- Built and shipped a live browser-based glitch art generator (React + Vite) with a hybrid WebGL/Canvas 2D rendering pipeline for real-time image, video, and webcam effects, including client-side video export to over 200 users.

TECHNICAL SKILLS

- **Backend:** Java, Spring Boot, Spring Security, JPA/Hibernate, RESTful API design, service-layer architecture
- **Databases:** PostgreSQL, MySQL, relational schema design
- **Frontend:** React, JavaScript, HTML/CSS
- **Languages:** Java, Python, JavaScript, SQL, HTML/CSS
- **Tools & Platforms:** Git, Maven, Vite, pdf.js, Google Cloud Platform (GCP), AWS
- **Core Concepts:** OOP, MVC, Agile, Authentication & Session Management, Concurrency

CERTIFICATIONS

- AWS Certified Developer Associate (DVA-C02)
- CS50P: Introduction to Programming with Python, Harvard University (edX)
